Risk Profile of the scheme	<p>Mutual Fund units involve investment risks including the possible loss of principal. Please read the SID carefully for details on risk factors before investment.</p> <p><b>Standard Risk Factors</b></p> <p>1. Investments in mutual fund units involves investment risks such as market risk, credit &amp; default</p>			

- risk, liquidity risk, trading volumes, settlement risk, including the possible loss of principal.
2. As the price/ value/ interest rates of the securities in which the scheme invests fluctuate, the value of your investment in the scheme may go up or down. The various factors which impact the value of the scheme's investments include, but are not limited to, fluctuations in the stock markets, bond markets, fluctuations in interest rates, prevailing political and economic environment, changes in government policy, factors specific to the companies and issuer of the securities, tax laws, liquidity of the underlying instruments, settlement periods, trading volumes etc.
  3. Past performance of the Sponsor/ AMC/ Mutual Fund does not guarantee future performance of the scheme.
  4. Baroda BNP Paribas Gilt Fund is the name of the scheme and does not in any manner indicate either the quality of the scheme or its future prospects and returns.
  5. The sponsors / associates are not responsible or liable for any loss resulting from the operation of the scheme beyond the initial contribution of Rs. 10,00,000/- (Rupees ten lakh only) to the corpus of the Mutual Fund made by it towards setting up the Fund.
  6. The present scheme is not a guaranteed or assured return scheme.

**Scheme Specific Risk factors are summarized as follows:**

**- Market Risk:**

All mutual funds and securities investments are subject to market risk and there can be no assurance / guarantee that the scheme's objectives will be achieved. The securities that the scheme invests in would be exposed to price changes on a day-to-day basis. These price changes may occur due to instrument-specific factors as well as general macroeconomic conditions.

Markets are volatile and can decline significantly in response to adverse issuer, political, regulatory, market or economic developments. The scheme may be subject to price volatility due to factors such as interest sensitivity, market perception, and creditworthiness of issuer and market liquidity.

Different parts of the market can react differently to these developments. The value of an individual security or particular type of security can be more volatile than the market as a whole and can perform differently from the value of the market as a whole.

**- Concentration Risk**

The scheme may pursue only a limited degree of diversification. It may invest a greater proportion of assets in the securities of very few issuers (within the limits permitted by regulation) or be concentrated on a few market sectors. This could have implications on the performance of the scheme. The scheme may be more sensitive to economic, business, political or other changes and this may lead to sizeable fluctuation in the Net Asset Value of the scheme.

**Risks associated with investing in fixed income securities:**

**1. Credit and Counterparty risk:**

Credit risk or default risk refers to the risk that an issuer of a fixed income security may default (i.e., will be unable to make timely principal and interest payments on the security or honor its contractual obligations).

Counterparty risk refers to the counterparty's inability to honor its commitments (payment, delivery, repayment, etc.) and to risk of default. This risk relates to the quality of the counterparty to which the scheme has exposures. Losses can occur in particular for the settlement/delivery of financial instruments or the conclusion of financial derivatives contracts.

The value of a fixed income security will fluctuate depending upon the changes in the perceived level of credit and counterparty risk as well as any actual event of default. Changes in financial conditions of an issuer, changes in economic and political conditions in general, or changes in economic or and political conditions specific to an issuer, all of which are factors that may have an adverse impact on an issuer's credit quality and security value.

**2. Liquidity Risk:**

The liquidity of the scheme's investment is inherently restricted by trading volumes in the securities in which the scheme invests.

A lower level of liquidity affecting an individual security or an entire market at the same time, may have an adverse bearing on the value of the scheme's assets. More importantly, this may affect the Fund's ability to sell particular securities quickly enough to minimise impact cost, as and when necessary to meet requirements of liquidity or to sell securities in response to triggers such as a specific economic/corporate

event.

Trading volumes, settlement periods and transfer procedures may restrict the liquidity of a few or all of the investments and may affect the liquidity of the investments of the scheme.

The scheme may be unable to implement purchase or sale decisions when the markets turn illiquid, missing some investment opportunities or limiting ability to face redemptions. The lack of liquidity could also lead to the risk that the sale price of a security could be substantially lower than the fair value of the security.

### 3. Interest Rate Risk & Re-investment Risk:

The value of an investment may be affected by interest rate fluctuations. Interest rates may be influenced by several elements or events, such as monetary policy, the discount rate, inflation, etc. The value of debt and fixed income securities held by the Scheme generally will vary inversely with the changes in prevailing interest rates. In general, price of debt and fixed income securities go up when interest rates fall, and vice versa. Securities of any issuer that has higher duration could be more risky in terms of price movements relative to those with lower duration. Thus any impact of interest rate changes would be higher on securities with higher duration irrespective of the status of the issuer of the security. The investments made by the Scheme are subject to reinvestment risk. This risk refers to the interest rate levels at which cash flows received from the securities in the Scheme are reinvested. The additional income from reinvestment is the "interest on interest" component. The risk is that the rate at which interim cash flows can be reinvested may be lower than that originally assumed.

### 4. Sovereign risk:

The Central Government of India is the issuer of the local currency debt in India. The Government raises money to meet its capital and revenue expenditure by issuing debt or discounted securities. Since payment of interest and principal amount has a sovereign status implying least probability of a default, such securities are known as securities with sovereign credit. It also implies that the credit risk on such Government securities is even lower than that on non-government securities with "AAA" rating and hence yields on government securities are even lower than yields on non-government securities with "AAA" rating.

#### Risks associated with Foreign Securities

The Scheme may invest in Foreign Securities including overseas debt / equities / ADRs / GDRs with the approval of RBI/SEBI, subject to such guidelines as may be issued by RBI/SEBI. The net assets, distributions and income of the Scheme may be affected adversely by fluctuations in the value of certain foreign currencies relative to the Indian Rupee to the extent of investments in these securities. Repatriation of such investment may also be affected by changes in the regulatory and political environments. Market risks can be greater with respect to political instability, lack of complete or reliable information, market irregularities or high taxation. The Scheme's NAV may also be affected by a fluctuation in the general and specific level of interest rates internationally, or the change in the credit profiles of the issuers. The liquidation of securities where investments will be made by the schemes shall be subject to the liquidity / settlement issues of the country of investment / settlement. Non-business days in country of investment / settlement may impact the liquidity of the scheme investments.

The Scheme may, where necessary, appoint advisor(s) for providing advisory services for such investments. The appointment of such advisor(s) shall be in accordance with the applicable requirements of SEBI. The fees and expenses would illustratively include, besides the investment management fees, custody fees and costs, transaction costs and overseas regulatory costs, the fees of appointed advisor(s). The fees related to these services would be borne by the AMC and would not be charged to the Scheme.

#### Risks associated with repo transactions in corporate debt

Risk factors associated with investments in repo transactions in corporate debt:

The Scheme may be exposed to counter party risk in case of repo lending transactions in the event of the counterparty failing to honour the repurchase agreement. However, in repo transactions, the collateral may be sold, and a loss is realized only if the sale price is less than the repo amount. The risk is further mitigated through over-collateralization (the value of the collateral being more than the repo amount).

	<p><b>Risks associated with segregated portfolio:</b></p> <ol style="list-style-type: none"> <li>Investor holding units of segregated portfolio may not able to liquidate their holding till the time recovery of money from the issuer.</li> <li>Security comprises of segregated portfolio may not realise any value.</li> <li>Listing of units of segregated portfolio in recognised stock exchange does not necessarily guarantee their liquidity. There may not be active trading of units in the stock market. Further trading price of units on the stock market may be significantly lower than the prevailing NAV.</li> <li>Trading in the units of segregated portfolio on the Exchange may be halted because of market conditions, including any halt in the operations of Depository Participants or for reasons that in view of the Exchange Authorities or SEBI, trading in the units is suspended and / or restricted. In addition, trading in units is subject to trading halts caused by extraordinary market volatility and pursuant to stock exchange rules of 'circuit filter'. There can be no assurance that the requirements of Stock Exchange necessary to maintain the listing of units of scheme will continue to be met or will remain unchanged.</li> </ol> <p>In addition to above and to the extent of the corpus of the Scheme investments in certain securities, the Scheme shall be subject to various risk factors. The Scheme shall also be subject to other risks including risk associated with inflation, legal risk, taxation risk, valuation risk, operational risk &amp; risk factors associated with processing of transaction, in case of investors investing in mutual fund units, through Stock Exchange Mechanism as provided in SID.</p> <p>Different types of securities in which the Scheme would invest as given in the Scheme Information Document/Key Information Memorandum carry different levels and types of risk. The above are some of the common risks associated with investments in various securities.</p> <p>Investors may, if they wish, consult their legal, tax, investment and other professional advisors to determine possible legal, tax, financial or other considerations of subscribing to or redeeming Units, i.e. before making a decision to invest/redeem Units.</p> <p><b>Investors in the Scheme are not being offered any guaranteed returns. Please refer to SID for more details on scheme specific risk factors.</b></p>						
<p>Risk Control Measures</p>	<p>Investments made by the Scheme would be in accordance with the investment objective of the Scheme and the provisions of the SEBI (MF) Regulations. Since investing requires disciplined risk management, the AMC would incorporate adequate safeguards for controlling risks in the portfolio construction process. While allocating and choosing securities, the Investment Manager will aim to diversify by gaining broad exposure to different industries and companies in order to reduce risk.</p> <p><b><u>Risk Mitigation measures for investments in debt instruments</u></b></p> <p>The investments in debt and Money Market instruments would be undertaken after assessing the associated credit risk, interest rate risk and liquidity risk. The AMC shall undertake credit evaluation of each investment opportunity and invest in rated papers of companies having a sound background, strong fundamentals and quality of management and financial strength. In addition, the Scheme would endeavor to invest in instruments with a relatively higher liquidity and will seek to manage the duration of the debt assets on proactive basis to manage interest rate risk and to optimize returns. The following table summarizes the risk mitigation/management strategy for the Debt assets of the Scheme.</p> <table border="1" data-bbox="316 1570 1490 2049"> <thead> <tr> <th data-bbox="316 1570 571 1637">Risk &amp; description specific to Debt</th> <th data-bbox="571 1570 1490 1637">Risk Mitigation/ management strategy</th> </tr> </thead> <tbody> <tr> <td data-bbox="316 1637 571 1832">Interest Rate Risk</td> <td data-bbox="571 1637 1490 1832">The duration of a portfolio is one of the means of measuring the interest rate risk of the portfolio. 	Liquidity Risk	Liquidity risk is the risk of not being able to sell / liquidate a security at short notice at prevailing market prices or without incurring impact cost. Liquidity Risk can be partly mitigated by creating portfolios that are diversified across maturities, ratings, types of securities, etc. in line with the fund objectives, regulations and investment strategy. The Scheme shall follow the asset allocation pattern in Scheme Information Document under normal circumstances and residual cash may be invested in the Tri-party repo on Government Securities and treasury bills, repo market, units of mutual fund which seeks to ensure liquidity in the scheme under normal circumstances.
	Volatility Risk	There is the risk of volatility in markets due to external factors like liquidity flows, changes in the business environment, economic policy etc. The Scheme will manage volatility risk through diversification. To that extent, the Volatility risk will be mitigated in the Scheme.
	Concentration Risk	The AMC will attempt to mitigate this risk by maintaining adequate diversification across issuers/ sectors / instrument type in line with the scheme objectives, investment strategy and applicable regulations. This will also be managed by keeping prudent investment limits on any particular industry or issuer or issuer group based on the size, credit profile, etc. to reduce issuer or industry specific risk.
	<p>The scheme may utilize derivative instruments for hedging &amp; portfolio balancing purposes. All Interest Rate Swaps will be undertaken with approved counter parties under pre-approved International Swaps and Derivatives Association (ISDA) agreements. The scheme may also use various derivatives and hedging products from time to time, as would be available and permitted by SEBI/RBI for the purpose of hedging and portfolio rebalancing.</p> <p>The above risk control measures shall be implemented by the AMC on best effort basis however there can be no guarantee that such measures can completely mitigate the risks involved in Scheme.</p>	
Plans & Options	<p>The Scheme has two plans thereunder, viz. Regular Plan and Direct Plan.</p> <p>Direct Plan is meant for direct investments, i.e., for investors who purchase/subscribe to the units of Scheme directly with the Fund and is not available for investors who route their investments through a Distributor, while Regular Plan is meant for investors who route their investments through distributors only. Both Plans will have a common portfolio, but Direct Plan will have a lower expense ratio on account of absence of brokerage and commission. Hence both plans will have distinct NAVs.</p> <p>The details of Options / Sub-Options (available under each Plan) are as under:</p> <ol style="list-style-type: none"> <li>A.
