ABOUT THE FUND

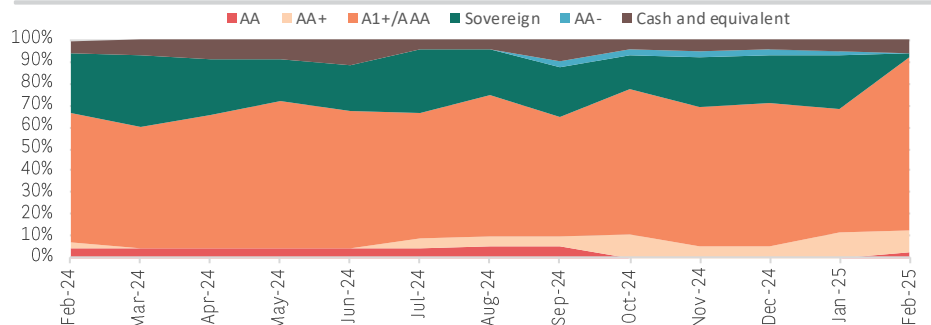

- Baroda BNP Paribas Short Duration Fund invests in fixed income instruments such that the Macaulay Duration of the portfolio is between 1 to 3 years.
- The Scheme aims to invest in a mix of high quality instruments at the shorter end of the yield curve. These may be commercial paper (CP), certificate of deposit (CDs), government securities, securities issued by private or public sectors companies, etc. The portfolio also aims to offer high liquidity along with moderate duration risk.
- The Scheme remains open to taking tactical duration calls.
- While investing in fixed income instruments, the scheme takes into account various factors affecting the Indian economy, interest rate scenario, and the relative valuation, maturity profile and liquidity of the securities, etc.
- The Scheme is suitable for short term investment horizon.

PORTFOLIO POSITIONING

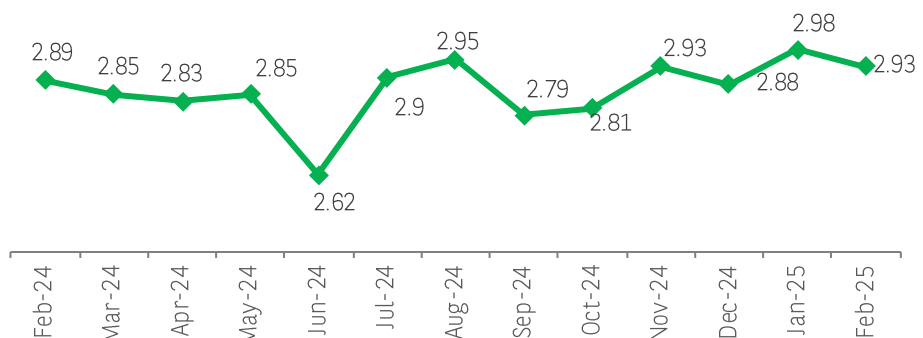

- RBI in its MPC of Feb 2025 has cut the repo rate by 25bps for the first time in 5 years. The cut was delivered with 6-0 vote, while maintaining the stance neutral.
- Economic Growth to have taken precedence over inflation. Currency concerns were evident in this monetary policy.
- The Benchmark yield rose by 5-7bps after the policy as MPC delayed the new norms of LCR by one more year that would have forced banks to buy extra Government securities but would have impacted negatively on banks' credit growth
- Liquidity during the month remained in negative due to GST outflow and FX intervention, however during the month end liquidity is eased because of FX buy/sell swap of \$10 bn for tenor 3 year, and month end government spending and frequent OMO
- The Overnight Rates eased by 25bps and remain largely at 6.25%.
- We remain invested ~80% in AAA rated and Sovereign instruments and balance in AA/AA+ rated good quality assets as it offers attractive spread over Government bonds. In addition, a small allocation is invested in AAA PTC to enhance the YTM and to diversify portfolio.
- We intend to keep the duration at the higher levels, near to 2.75-3.00 years and the scheme remains open to taking tactical duration calls.

Product Labelling

Baroda BNP Paribas Short Duration Fund
(An open-ended short term debt scheme investing in instruments such that the Macaulay duration* of the portfolio is between 1 year and 3 years. A relatively high interest rate risk and Moderate Credit Risk)

This product is suitable for investors who are seeking*:

- ▶ Regular income over short term.
- ▶ Investment predominantly in Money Market Instruments (i.e. CP/CD) and Short Term Debt Market Instruments.

***Investors should consult their financial advisers if in doubt about whether the product is suitable for them.**

Scheme Riskometer**

Investors understand that their principal will be at Moderate risk.

Benchmark (Tier 1) Riskometer**

Benchmark riskometer is at Low to Moderate risk.

**Riskometer For Scheme: basis It's portfolio, *Riskometer For Benchmark (CRISIL Short Duration Debt A-II Index): basis It's constituents; as on February 28, 2025

***Concept of Macaulay duration:**
The Macaulay Duration is a measure of a bond's sensitivity to interest rate changes. It is expressed in annual terms. It is the weighted average term to maturity of the cash flows from a bond. The weight of each cash flow is determined by dividing the present value of the cash flow by the price. Factors like a bond's price, maturity, coupon, yield to maturity among others impact the calculation of Macaulay duration.

Data as on February 28, 2025

Together for more**

**The word 'more' does not imply more returns or assurance of scheme performance; it refers to the additional value provided by the joint venture, as compared to Baroda AMC and BNP Paribas AMC individually

Potential Risk Class (PRC) matrix*			
Credit Risk (Max)- Interest Rate Risk (Max):	Relatively Low: Class A (CRV>=12)	Moderate: Class B (CRV>=10)	Relatively High: Class C (CRV<10)
Relatively Low: Class I (MD<=1year)			
Moderate: Class II (MD<=3year)			
Relatively High: Class III (Any MD)		B-III	

MD=Macaulay Duration, CRV=Credit Risk Value.

The above PRC matrix denotes the maximum risk that the Scheme can take i.e. maximum interest rate risk (measured by MD of the scheme) and maximum credit risk (measured by CRV of the scheme)

DISCLAIMERS

† Concept of Macaulay duration: The Macaulay Duration is a measure of a bond's sensitivity to interest rate changes. It is expressed in annual terms. It is the weighted average term to maturity of the cash flows from a bond. The weight of each cash flow is determined by dividing the present value of the cash flow by the price. Factors like a bond's price, maturity, coupon, yield to maturity among others impact the calculation of Macaulay duration. The Macaulay duration can be viewed as the economic balance point of a group of cash flows. Another way to interpret the statistic is that it is the weighted average number of years an investor must maintain a position in the bond until the present value of the bond's cash flows equals the amount paid for the bond. As it provides a way to estimate the effect of certain market changes on a bond's price, the investor can choose an investment that will better meet his future cash needs.
