risk, liquidity risk, trading volumes, settlement risk, including the possible loss of principal. As the price/value/interest rates of the securities in which the scheme invests fluctuate, the value of your investment in the scheme may go up or down. The various factors which impact the value of the scheme's investments include, but are not limited to, fluctuations in the stock markets, bond markets, fluctuations in interest rates, prevailing political and economic environment, changes in government policy, factors specific to the companies and issuer of the securities, tax laws, liquidity of the underlying instruments, settlement periods, trading volumes etc.

- The sponsor / associates are not responsible or liable for any loss resulting from the operation of the scheme beyond the initial contribution of Rs. 1,00,000/- (Rupees One lakh only) to the corpus of the Mutual Fund made by it towards setting up the Fund.
- The present scheme is not a guaranteed or assured return scheme.

## Scheme Specific Risk Factors:

**Market Risk:** All mutual funds and securities investments are subject to market risk and there can be no assurance / guarantee that the scheme's objectives will be achieved. The securities that the scheme invests in would be exposed to price changes on a day-to-day basis. These price changes may occur due to instrument-specific factors as well as general macroeconomic conditions.

Markets are volatile and can decline significantly in response to adverse issuer, political, regulatory, market or economic developments. The scheme may be subject to price volatility due to factors such as interest sensitivity, market perception, and creditworthiness of issuer and market liquidity.

Different parts of the market can react differently to these developments. The value of an individual security or particular type of security can be more volatile than the market as a whole and can perform differently from the value of the market as a whole.

## Concentration Risk:

The scheme may pursue only a limited degree of diversification. It may invest a greater proportion of assets in the securities of very few issuers (within the limits permitted by regulation) or be concentrated on a few market sectors. This could have implications on the performance of the scheme. The scheme may be more sensitive to economic, business, political or other changes and this may lead to sizeable fluctuation in the Net Asset Value of the scheme.

### Risks associated with investing in fixed income securities: - Credit and Counterparty risk:

Credit risk or default risk refers to the risk that an issuer of a fixed income security may default (i.e., will be unable to make timely principal and interest payments on the security or honor its contractual obligations).

Counterparty risk refers to the counterparty's inability to honor its commitments (payment, delivery, repayment, etc.) and to risk of default. This risk relates to the quality of the counterparty to which the scheme has exposures. Losses can occur in particular for the settlement/delivery of financial instruments or the conclusion of financial derivatives contracts. The value of a fixed income security will fluctuate depending upon the changes in the perceived level of credit and counterparty risk as well as any actual event of default. If the credit rating of an issue, issuer or counterparty is downgraded this may cause the value of the related debt securities in which the scheme has invested to fall. This Scheme might hold large or all amount of its assets to securities with credit rating BBB, or lower in case of downgrading. This could present a much higher than average risk.

The severity of the risk varies depending on the quality of the securities in the scheme. To the extent that the scheme invests in high-yield bonds, this presents a higher than average risk. There are different types of debentures available in the market. Some of them could be more risky. Lower-quality debt securities and certain types of securities involve greater risk of default or price changes due to changes in the credit quality of the issuer. They are not in the first rank of debts in case of default. The value of lower-quality debt securities and certain types of other securities can be more volatile due to increased sensitivity to adverse issuer, political, regulatory, market or economic developments.

## Liquidity Risk:

The liquidity of the scheme's investment is inherently restricted by trading volumes in the securities in which the scheme invests.

A lower level of liquidity affecting an individual security or an entire market at the same time, may have an adverse bearing on the value of the scheme's assets. More importantly, this may affect the Fund's ability to sell particular securities quickly enough to minimise impact cost, as and when necessary to meet requirements of liquidity or to sell securities in response to triggers such as a specific economic /corporate event. Trading volumes, settlement periods and transfer procedures may restrict the liquidity of a few or all of the investments and may affect the liquidity of the investments of the scheme.

The scheme may be unable to implement purchase or sale decisions when the markets turn illiquid, missing some investment opportunities or limiting ability to face redemptions. The lack of liquidity could also lead to the risk that the sale price of a security could be substantially lower than the fair value of the security.

### Interest Rate Risk & Re-investment Risk:

The value of an investment may be affected by interest rate fluctuations. Interest rates may be influenced by several elements or events, such as monetary policy, the discount rate, inflation, etc. The value of debt and fixed income securities held by the Scheme generally will vary inversely with the changes in prevailing interest rates. In general, price of debt and fixed income securities go up when interest rates fall, and vice versa. Securities of any issuer that has higher duration could be more risky in terms of price movements relative to those with lower duration. Thus any impact of interest rate changes would be higher on securities with higher duration irrespective of the status of the issuer of the security. The investments made by the Scheme are subject to reinvestment risk. This risk refers to the interest rate levels at which cash flows received from the securities in the Scheme are reinvested. The additional income from reinvestment is the "interest on interest" component. The risk is that the rate at which interim cash flows can be reinvested may be lower than that originally assumed. There have been times in the past, when settlements have been unable to keep pace with the volume of securities transactions, making it difficult to conduct further transactions. Delays or other problems in settlement of transactions could result in temporary periods when the assets of the Scheme are not invested and no return is earned thereon.

### Sovereign risk:

The Central Government of India is the issuer of the local currency debt in India. The Government raises money to meet its capital and revenue expenditure by issuing debt or discounted securities. Since payment of interest and principal amount has a sovereign status implying least probability of a default, such securities are known as securities with sovereign credit. It also implies that the credit risk on such Government securities is even lower than that on non-government securities with "AAA" rating and hence yields on government securities are even lower than yields on non-government securities with "AAA" rating.

## Risk associated with investment in unrated instruments:

The scheme may invest in lower rated/unrated instruments considering the overall risk of the portfolio. This may increase the absolute level of risk of the portfolio. The credit risk & liquidity risk will be relatively higher for lower/unrated instruments as compared to the instruments that have been assigned investment grade ratings. Lower rated/ unrated securities also tend to be more sensitive to economic conditions than instruments that have been assigned investment grade ratings.

## Risks associated with Securities Lending:

The risks in lending portfolios securities as with other extensions of credit consist of the failure of another party, in this case the approved intermediary, to comply with the terms of agreement entered into between the lender of securities i.e. the Schemes and the approved intermediary. Such failure to comply can result in the possible loss of rights in the collateral put up by the borrower of the securities, the inability of the approved intermediary to return the securities deposited by the lender and the possible loss of any corporate benefits accruing to the lender from the securities deposited with the approved intermediary. The Mutual Fund may not be able to sell such lent securities and this can lead to temporary illiquidity.

Risks associated with investing in securitised debt: The scheme may invest in domestic securitized debt such as asset backed securities (ABS) or
mortgage backed securities (MBS). ABS means securitized debt such as asset backed securities (ABS) of mortgage backed securities (MBS). ABS means securitized debts wherein the underlying assets are receivables arising from personal loans, automobile loans, etc. MBS means securitized debts wherein the underlying assets are receivables arising from loans backed by mortgage of properties which can be residential or commercial in nature. ABS / MBS instruments reflect the undivided interest in the underlying of assets and do not represent the obligation of the issuer of ABS / MBS or the originator of the underlying receivables. The ABS / MBS holders have a limited recourse to the extent of credit enhancement provided. Securitized debt may suffer credit losses in the event of the delinquencies and credit losses in the underlying pool exceeding the credit enhancement provided. As compared to the normal corporate or sovereign debt, securitized debt is normally exposed to a higher level of reinvestment risk. For further details, please refer SID.
<b>Risks associated with investing in liquid funds:</b> To the extent of the investments in liquid mutual funds, the risks associated with investing in liquid funds like market risk, credit & default risk, liquidity risk, redemption risk including the possible loss of principal; etc. will exist.
Risk associated with investments in derivatives (including Imperfect Hedging with
<b>Investments in Interest Rate Futures(IRFs)):</b> The Scheme may use various derivative instruments and techniques, permitted within SEBI Regulation from time to time only for portfolio balancing and hedging purpose, which may increase the volatility of scheme's performance. Usage of derivatives will expose the scheme to certain risks inherent to such derivatives.
Derivative products are specialized instruments and can provide disproportionate gains as well as disproportionate losses to the investor. Execution of such strategies depends upon the ability of the fund manager to identify such opportunities. Identification and execution of the strategies to be pursued by the fund manager involve uncertainty and decision of fund manager may not always be profitable. No assurance can be given that the fund manager will be able to identify or execute such strategies. The risks associated with the use of derivatives are different from or possibly greater than the risks associated with investing directly in securities and other traditional investments. The use of a derivative requires an understanding not only of the underlying instrument but also of
the derivative itself. There is a possibility that a loss may be sustained by the Scheme as a result of the failure of another party (usually referred to as the "counterparty") to comply with the terms of the derivatives contract. Other risks in using derivatives include the risk of mispricing or improper valuation of derivatives and the inability of derivatives to correlate perfectly with underlying assets, interest rates and indices. Even a small price movement in the underlying instrument could have a large impact on their value. This could increase the volatility of the Scheme's performance. In case of hedge, it is possible that derivative positions may not be perfectly in line with the underlying assets they are hedging. As a consequence the derivative cannot be expected to perfectly hedge the risk of the underlying assets. This also increases the volatility of the Scheme's performance.
Some of the risks inherent to derivatives investments include:
1. <b>Price Risk</b> : Despite the risk mitigation provided by various derivative instruments, there remains an inherent price risk which may result in losses exceeding actual underlying.
2. <b>Default Risk</b> : This is the risk that losses will be incurred due to default by counter party. This is also known as credit risk or counterparty risk.
3. <b>Basis Risk</b> : This risk arises when the derivative instrument used to hedge the underlying asset does not match the movement of the underlying being hedged for e.g. mismatch between the maturity date of the futures and the actual selling date of the asset.
4. Limitations on upside: Derivatives when used as hedging tool can also limit the profits from a genuine investment transaction.
<ol> <li>Liquidity risk: This risk pertains to how saleable a security is in the market. All securities/instruments irrespective of whether they are equity, bonds or derivatives may be exposed to liquidity risk (when the sellers outnumber buyers) which may impact returns while exiting opportunities.</li> </ol>

ORMATION MI	LINUKANDUM
T c F f f v v i i	Risk factors specific to investments in foreign securities: To the extent that the assets of the scheme may invest in foreign securities, there may be risks associated with currency movements, restrictions on repatriation and transaction procedures in overseas market, lack of complete or reliable information, market irregularities or high taxation. Further, the repatriation of capital to India may also be hampered by changes in regulations or political circumstances. Market risks can be greater with respect to political instability, lack of complete or reliable information, market irregularities or high taxation. As the investment will be n securities, which are denominated in foreign currencies, fluctuation in the exchange rates of the foreign currencies may have an impact on the income and value of the fund. It may be noted that if rupee appreciates, it will lead to reduction in returns to investor. The liquidation of securities where investments will be made by the schemes shall be subject to the liquidity / settlement ssues of the country of investment / settlement. Non-business days in country of investment / settlement may impact the liquidity of the scheme's investments.
F • •	<ul> <li>restricted by trading volumes, settlement periods, dissolution of the trust, potential delisting of units on the exchange etc, the time taken by the Mutual Fund for liquidating the investments in the scheme may be high in the event of immediate redemption requirement. Investment in such securities may lead to increase in the scheme portfolio risk. Further, there is no assurance that an active secondary market will develop or be maintained. Hence there would be time when trading in the units could be infrequent. The subsequent valuation of illiquid units may reflect a discount from the market price of comparable securities for which a liquid market exists</li> <li><b>Risk of lower than expected distributions:</b> The distributions by the REIT or InvIT will be based on the net cash flows available for distribution. The amount of cash available for distribution principally depends upon the amount of cash that the REIT/InvIT receives as dividends or the interest and principal payments from portfolio assets. The cash flows generated by portfolio assets from operations may fluctuate based on, among other things:</li> <li>success and economic viability of tenants and off-takers</li> <li>economic cycles and risks inherent in the business which may negatively impact valuations, returns and profitability of portfolio assets</li> </ul>
	<ul> <li>force majeure events related such as earthquakes, floods etc. rendering the portfolio assets inoperable</li> <li>debt service requirements and other liabilities of the portfolio assets</li> <li>fluctuations in the working capital needs of the portfolio assets</li> <li>ability of portfolio assets to borrow funds and access capital markets</li> <li>changes in applicable laws and regulations, which may restrict the payment of dividends by portfolio assets</li> <li>amount and timing of capital expenditures on portfolio assets</li> <li>insurance policies may not provide adequate protection against various risks associated</li> </ul>
	with operations of the REIT/InvIT such as fire, natural disasters, accidents.
•	<ul> <li>Credit Risk: In simple terms this risk means that the issuer of a debenture/ bond or a money market instrument may default on interest payment or even in paying back the principal amount on maturity. REITs &amp; InvITs are likely to have volatile cash flows as the repayment dates would not necessarily be pre scheduled.</li> </ul>

	<ul> <li>Regulatory/Legal Risk: REITs and InvITs being new asset classes, rights of unit holders such as right to information etc may differ from existing capital market asset classes under Indian Law. The above are some of the common risks associated with investments in REITs &amp; InvITs. There can be no assurance that a Scheme's investment objectives will be achieved, or that there will be no loss of capital. Investment results may vary substantially on a monthly, quarterly or annual basis.</li> <li>Risks associated with segregated portfolio:         <ul> <li>Investor holding units of segregated portfolio may not able to liquidate their holding till the time recovery of money from the issuer.</li> <li>Security comprises of segregated portfolio in recognised stock exchange does not necessarily guarantee their liquidity. There may not be active trading of units in the stock market. Further trading price of units on the stock market may be significantly lower than the prevailing NAV.</li> <li>Trading in the units of segregated portfolio on the Exchange may be halted because of market conditions, including any halt in the operations of Depository Participants or for reasons that in view of the Exchange Authorities or SEBI, trading in the units is suspended and / or restricted. In addition, trading in units is subject to trading halts caused by extraordinary market volatility and pursuant to stock exchange rules of 'circuit filter'. There can be no assurance that the requirements of Stock Exchange necessary to maintain the listing of units of scheme will continue to be met or will remain unchanged.</li> </ul></li></ul>
	Other Risks Other risks including risk associated with inflation, legal risk, taxation risk, valuation risk & operational risk & risk factors associated with processing of transaction in case of investors investing in mutual fund units through Stock Exchange Mechanism as provided in Scheme Information Document.
	Investors in the Scheme are not being offered any guaranteed returns. Please refer to SID for more details on scheme specific risk factors.
Risk Control Measures	Since investing requires disciplined risk management, the AMC would incorporate adequate safeguards for controlling risks in the portfolio construction process. While allocating and choosing securities, the Investment Manager will aim to diversify by gaining broad exposure to different industries and companies in order to reduce risk. For investments in fixed income instruments, a credit evaluation of each investment opportunity will be undertaken to manage credit risk. The AMC will utilize ratings of recognized rating agencies as an input in the decision making process. The fund manager shall follow the asset allocation pattern in SID under normal circumstances and residual cash may be invested in the Tri-party repo on Government Securities and treasury bills, repo market, units of mutual fund which seeks to ensure liquidity risk within the scheme. The AMC may also implement certain internal control procedures / risk exposure limits etc. for controlling risks which may be varied from time to time. The scheme may utilize derivative instruments for hedging & portfolio balancing purposes. All Interest Rate Swaps will be undertaken with approved counter parties under pre-approved International Swaps and Derivatives Association (ISDA) agreements. The scheme may also use various derivatives and hedging products from time to time, as would be available and permitted by SEBI/RBI for the purpose of hedging and portfolio rebalancing. The above risk control measures shall be implemented by the AMC on best effort basis however there

<sup>^</sup> Investors should note that in case of Daily STP, the commencement date for transfers shall be the 15th working day from the date of receipt of a valid request and thereafter, transfers shall be effected on all business days at NAV based prices, subject to applicable load. In case the Weekly / Fortnightly / Monthly Quarterly STP execution date falls on non-business day, the next business day will be considered as date of transfer. In the event of an intervening non-business day STP triggers will not take place and consequently the total number of Daily STP installments opted by the investor will be adjusted to that extent i.e., For e.g. if the investor has opted for 50 installments and if 8 nonbusiness days happen to occur in the intervening period, then only 42 Daily STP installments shall be triggered.

In case investor has selected any one of the facility but has not selected frequency and / or date or incase of any ambiguity, by default, monthly frequency & 7th day shall be considered as frequency & execution date respectively. **Investors should note that CASTF facility is not available for Daily STP.**
- 12. In FSTF, in case there is no minimum amount (as specified above) available in the unit holder's account for Transfer into Transferee Scheme, the transfer shall not be executed and the request of unit holder will stand withdrawn with immediate effect.

- 13. In CASTF, if there is no minimum appreciation amount in the Transferor scheme for the consecutive three installments, the STP request of the unitholder will stand withdrawn with immediate effect. Subsequent capital appreciation, if any, will be the capital appreciation between the previous CASTF date (where transfer has been processed) and the next CASTF date
- 14. A request for STP will be treated as a request for redemption from the Transferor scheme and subscription into the selected Transferee scheme(s), option(s) / plan(s), at the applicable NAV, subject to load and statutory levy, if any.
- 15. In case of minor applicant, the guardian can opt for STP only till the date of minor attaining majority.
